

RevoltTOKEN (RVLT)

RevoltTOKEN (RVLT) Cryptocurrency Summary (See White Paper That Follows)

RevoltTOKEN is issuing a blockchain enabled cryptocurrency to fund the development and delivery of electric mobility innovation in Africa. RevoltTOKEN is a utility token that gives the bearer a first right to purchase equity in electric mobility businesses that are forthcoming from the overall electric mobility initiative in Africa funded by RevoltTOKEN. Holders of RevoltTOKEN will also be eligible for preferential participation in the annual electric mobility seminar, conference and race described herein.

RevoltTOKEN is already engaged in the development of an electric motorcycle shared ride solution currently headquartered in Kenya with growth plans throughout Sub Sahara Africa. RevoltTOKEN has also developed a plan to conduct an annual electric mobility seminar and conference to bring leading electric mobility research and development initiatives from around the world with existing electric mobility vendors to design and advance specific electric mobility projects. RevoltTOKEN has engaged with a global brand name electric vehicle racing event with the intent of engaging the racing event as an anchor to the annual electric mobility seminar and conference. RevoltTOKEN intends to participate in the funding of specific electric mobility projects and the corresponding investment returns that could be forthcoming from such participation. RevoltTOKEN plans to extend specific electric mobility participation opportunities to holders of the RevoltTOKEN cryptocurrency.

At this time, the following details the specific rights, dividends and benefits of the RevoltTOKEN cryptocurrency:

Redemption Rights

- 1 Token Tokens – 1/10,000 of A Revolt Electric Motorcycle

Dividend Rights

- 1 Token – Annual Carbon Credit Dividend (Distribution to be determined upon successful approval of the Carbon Credit)

Benefits

- Free Attendance E-Mobility Conference & Symposium
- VIP Access To Africa Electric Auto Racing

RevoltTOKEN (RVLT)

Abstract

RevoltTOKEN (RVLT) is conceived on the assumption that blockchain technology has already been implemented and established a fundamental underlying technological protocol that can now be universally utilized to build improved social contracts with specific objectives. Several publicly available references now exist that detail the underlying technological protocol that empowers the creation of cryptocurrencies to advance social contracts emphasizing a systematic cooperation on property rights, equal access, value and transparency. Herein, a specific social contract is detailed that builds upon the founding principles of systematic cooperation. RevoltTOKEN benefits all those participating directly in the contract in addition to inherently providing a multifaceted universal benefit imperative to the ongoing democratization of economic equity and environmental responsibility.

Introduction

The return on investment potential from delivering technology innovation to developing economic populations will be unbeatable for the next 100 years. Approximately 1.2 billion people today live in the developed economies of North American and Europe. With a global population of 7.7 billion, that leaves some 6.5 billion people living in regions of the world underserved by current technological capacities. Technology innovation that, for instance, improves energy efficiency and, in turn, increases access to power and transportation within developing economic

countries can deliver Rockefeller returns to the investors backing the innovation. The current state of investment innovation backed by blockchain technology opens access to such investment opportunities to anyone with an internet connection. RevoltTOKEN (RVLT) is introducing a blockchain enabled cryptocurrency specifically for the purpose of providing everyone the opportunity to invest in the development and delivery of electric mobility technology innovation in Africa.

“Go Global, Young Person”

“Go west, young man” is a popular slogan from the 1860’s encouraging young people in the United States (U.S.) to pursue the economic opportunities presented by westward expansion. The 1800’s in the U.S. were a time of rapid economic growth ripe with individual opportunity. Rockefeller’s Standard Oil brought light to America in the form of oil lamps. Cornelius Vanderbilt built the railway that delivered Rockefeller’s oil. J.P. Morgan hired Thomas Edison and replace Rockefeller’s oil lamps with electric lights. Thanks to Henry Ford’s entrepreneurialism in the early 1900’s, the oil

RevoltTOKEN (RVLT)

industry enjoyed continued expansion opportunity. All in all, the 1900's proved to be a period of continued rapid economic growth in the United States and much of what is now called the "developed" world. Chuck Yeager broke the sound barrier in 1947 launching decades of aeronautical innovation advancements that changed many existing industries while creating other entirely new industries. In the 1970's, Bill Gates and Steve Jobs set the still evolving information age in motion. However, the historic impact of industrial innovation over the last 200 years has been centered on the 1.2 billion population residing within the developed world. Today, the entrepreneurial growth potential in the developed world is at best incremental when compared to the absolutely exponential potential for entrepreneurial growth to come from serving the 6.5 billion population residing within the still developing regions of the world. The best advice to those young people coming of age today that are seeking the greatest of economic opportunities might just be, "go global young person, go global."

Leapfrog Potential

With 6.5 billion people, the developing economic regions of the world have the fundamental human capital essential to propel exponential economic growth. Technology innovation can empower the underutilized human capital of the developing world by delivering physical infrastructure solutions that leapfrog the incumbent state of technology found in the developed world. The per capita consumption of electricity in the U.S. is twenty-six (26) times higher than per capita consumption in Sub Sahara Africa according to a

report titled *Powering African* from McKinsey & Company.

The electric delivery infrastructure in the U.S. is tied to dated generation technologies updated incrementally and transmitted across a vast network of poles, towers, and transformers that resemble the components of the first electric grid that originated in the 1800's. At the same time, current research and development in the field of magnetic induction and resonant coupling can potentially provide a wireless electric grid. Imagine the exponential economic productivity potential that could result from harnessing a leapfrog magnetic induction and resonant coupling technology to increase the delivery of electricity in Sub Sahara Africa to the entire population of one billion. Today, only half the population of Sub Sahara Africa has access to continuous electric current.

Per capita automobile ownership in the U.S. is seventy percent (70%) and fifty percent (50%) in Europe. Per capita automobile ownership in Africa is just two percent (2%). The inevitable transportation productivity improvements coming in Africa are unlikely to include any resemblance to the individual automobile ownership model underlying the transportation infrastructure in the

RevoltTOKEN (RVLT)

U.S. and Europe. Africa is ripe for the technology leapfrog rollout of electric powered, self-driving, connected autonomous vehicles (CAVs) delivering individualized transportation solutions via a shared ride model.

RevoltTOKEN (RVLT) Cryptocurrency

RevoltTOKEN is issuing a blockchain enabled cryptocurrency to fund the development and delivery of electric mobility innovation in Africa. RevoltTOKEN is a utility token that gives the bearer a first right to purchase equity in electric mobility businesses that are forthcoming from the overall electric mobility initiative in Africa funded by RevoltTOKEN. Holders of RevoltTOKEN will also be eligible for preferential participation in the annual electric mobility seminar, conference and race described below.

RevoltTOKEN is already engaged in the development of an electric motorcycle shared ride solution currently headquartered in Kenya with growth plans throughout Sub Sahara Africa. RevoltTOKEN has also developed a plan to conduct an annual electric mobility seminar and conference to bring leading electric mobility research and development initiatives from around the world with existing electric mobility vendors to design and advance specific electric mobility projects. RevoltTOKEN has engaged with a global brand name electric vehicle racing event with the intent of engaging the racing event as an anchor to the annual electric mobility seminar and conference. RevoltTOKEN intends to participate in the funding of specific electric mobility projects and the corresponding investment returns that could be forthcoming from such participation.

RevoltTOKEN plans to extend specific electric mobility participation opportunities to holders of the RevoltTOKEN cryptocurrency.

At this time, the following details the specific rights, dividends and benefits of the RevoltTOKEN:

Redemption Rights

- 1 Token– 1/10,000 of Revolt Electric Motorcycle

Dividend Rights

- 1 Token – Annual Carbon Credit Dividend (Distribution to be determined upon successful approval of the Carbon Credit)

Benefits

- Free Attendance E-Mobility Conference & Symposium
- VIP Access To Africa Electric Auto Racing

Social Imperative

“Social responsibility” theoretically holds everyone accountable to performing their civic duty and contributing to the good of all society. In practice, “social responsibility” is merely a new term for “charity” providing individuals the selective opportunity to voluntarily act philanthropically toward a marginalized population or unsponsored universal issue. The conception of RevoltTOKEN holds vital the principal of “social imperative” whereby the potential to benefit from one’s own actions, undertakings or investments is inseparably linked with the overall good of society. Marginalized populations and unsponsored universal issues are liabilities for all society. Acting “selfishly” mandates the performance of civic duty because

RevoltTOKEN (RVLT)

marginalized populations and unsponsored universal issues present an unavoidable risk to everyone's self-interest. In keeping with the founding principal of systematic cooperation which is embedded into the underlying technological protocol of cryptocurrency, the RevoltTOKEN social contract systematically benefits all society by contributing to the overall economic advancement of the Sub Sahara Africa region. Transportation infrastructure is a core component of fundamental economic growth and any economic benefit derived from holding the RevoltTOKEN will have also contributed to advancing the transportation infrastructure in Sub Sarah Africa.

Economic Equity

All political economic systems exclude the vast majority of citizens from having equal access to participating in the equity market. Whether it's a communist, socialist or capitalist society, most people do not have equal access to most investment opportunities. The foundation of cryptocurrency was largely motivated by empowering everyone to have equal access to investment opportunities.

While most people likely understand how communist and socialist systems limit the participation of their citizens in owning any means of economic production in favor of the state otherwise controlling those means, the capitalist system limitations may be more surprising. Nevertheless, most people are aware of the widening wealth gap within developed economic nations. In the United States, only three percent (3%) of households have income over \$300,000.

Not coincidentally, an annual household income of \$300,000 or a net worth of \$1 million is required for one to be deemed an "accredited investor" according to U.S. securities law. The U.S. Government has instituted laws ostensibly to protect lower net worth individuals from riskier investments. The net impact, however, is that most citizens in the U.S. – an estimated 97% of all citizens – are precluded from participating in many investments. Can a democratic capitalist system where everyone's allowed to vote but 97% of those voters are not allowed to fully participate in the capitalist economy be considered an actual a democracy? There was a time in U.S. history when many citizens were not allowed to vote based on race and sex. Is the preclusion of voting rights based on race and sex any more unethical or offensive than the preclusion of one's right to freely elect to participate in the capitalist economy based on their existing net worth?

A worldwide movement to democratize investment opportunity is underway in many forms. In 2012, President Obama signed Crowdfunding into law under JOBS Act. The idea behind Crowdfunding is to open the opportunity to invest in start-up and early stage companies to

RevoltTOKEN (RVLT)

all investors. It took the U.S. Government three more years to actually implement rules so Crowdfunding could proceed, but when they did, the legal framework for Crowdfunding was constricting and complicated and not in keeping with the spirit of the law passed in 2012. Crowdfunding for equity investments remains a very limited market today.

Bitcoin was conceived in 2008 and launched in 2009 by an anonymous founder or founders operating under the name Satoshi Nakamoto. The founders penned their intention to advance the general social contract between government and citizens by introducing a currency that was available to everyone and that systematically managed those functions otherwise corruptibly overseen by a governing authority. No central bank is required to adjust interest rates or control the availability of currency. No treasury department is required to prevent fraud or counterfeiting. No regulatory commission is necessary to set property rights. Cryptocurrency is technologically designed to benefit and impact all participants equally through free market cooperation. Cryptocurrency is intended to improve the democratization of participation in a capitalist economy. RevoltTOKEN is conceived in keeping with the founding cryptocurrency intent to improve the democratization to capitalist participation.

Environmental Responsibility

RevoltTOKEN is not only committed to advancing electric mobility, but it is equally committed to electric mobility solutions that include renewable energy goals that contribute to reducing carbon

emissions. Carbon emission reduction beyond just reducing the number of combustion engine powered cars can be improved by an emphasis on electricity generated from renewable energy solutions that do not require carbon emitting fuels for electric generation.

The effects of climate change are forecasted to negatively impact developing economic regions more than developed regions. Developing economic regions are generally located in warmer climates than those in the developed world. Developing economic regions also typically rely more heavily on climate sensitive business sectors such as agriculture, forestry and tourism which will likely all be negatively impacted by rising temperatures. Africa for instance is facing declining crop yields and is anticipated to soon be struggling to produce sufficient food for domestic consumption. The climate change issues specific to developing economic regions will cause related issues for developed economies through increased immigration pressure and political animosity. Addressing the developing economic specific global climate change issues is a universal social imperative. RevoltTOKEN is designed to systematically serve the developing economic specific global climate change social imperative.

Summary

RevoltTOKEN is a utility token designed to provide holders with a democratic economic opportunity derived from a diverse advance of electric mobility developments in Sub Sahara Africa greater in magnitude than an equity investment in Tesla. RevoltTOKEN is founded in

RevoltTOKEN (RVLT)

keeping with the socioeconomic social contract principles upon which cryptocurrency itself was originated. Participation in RevoltTOKEN is intended to deliver a high profit opportunity while equally serving the universal social imperative.
